About

A student who has a strong interest in **AI, Web Technologies**, and system **automation** with passion in exploring the intersection of innovation, real-world problem solving, developing secure systems, and designing intuitive software interfaces. I enjoy building tools that automate other software tools and developing **MERN stack** apps.

Education

JSS Academy of Technical Education <i>Bachelor of Engineering in Computer Science (CGPA – 8.54)</i>	Bengaluru, Karnataka <i>Oct 2022 – Feb 2026</i>
Geetanjali Olympiad School <i>11th and 12th Grade</i>	Bengaluru, Karnataka <i>Jun 2020 – Jul 2022</i>
Baldwin Boys High School <i>1st to 10th Grade</i>	Bengaluru, Karnataka <i>Jun 2010 – Jul 2020</i>

Internships

SDE Intern — Automation of HILS Framework – A Web-Based Approach Aeronautical Development Establishment (ADE) – DRDO, Bengaluru	<i>Sept. 2025 – Oct. 2025</i>
- Developed a python-based web app which automated RT-LAB simulation workflows, which involved automating processes like Load, Build, Execute, Stop, and Reset, along with real time system testing. Reducing manual effort by 70%. - Integrated MATLAB Script management and simulation control which consisted of secure user authentication, file upload, and syntax validation. - Enhanced legacy RT-Lab infrastructure (Python 2.6.4, MATLAB R2012B), with backward compatibility, password hashing, and input validation.	

Projects

AI Resume Analyzer & LinkedIn Job Scraper — Python, LangChain, FAISS, Selenium	<i>2025 - 2026</i>
- Designed a resume analysis system using RAG, LangChain, FAISS, and OpenAI GPT models to evaluate resumes, generate personalized feedback, identify strengths and weaknesses, and recommend suitable job roles. - Built a semantic search and LinkedIn job scraping pipeline using FAISS and Selenium to retrieve relevant job postings, company details, and job descriptions, streamlining job discovery and application workflows.	
Q-Secure Chat — Python, JavaScript, HTML, CSS	<i>2023 – 2024</i>
- Implemented a secure messaging client with the help of post-quantum encryption techniques, which resists future quantum threats and intrusions. - Demonstrated multiple quantum-safe alternatives for RSA to act as a long-term end-to-end encrypted communication method.	
Website Blocker — Python, Tkinter, HTML	<i>2022 – 2023</i>
- Designed a desktop app for blocking distracting/explicit websites for exam integrity and safety of students in educational institutions. - Implemented real-time toggle, scheduled blocking, and editable block lists.	

Technical Skills

Languages: Java, Python, C/C++, JavaScript, SQL
Frameworks: React.js, Node.js, Express.js, Flask, Streamlit
Generative AI: LangChain, OpenAI API, RAG, FAISS
Databases: MySQL, MongoDB
Cloud & Tools: Git, GitHub, AWS, GCP, Selenium, VS Code
Libraries: Pandas, NumPy, Matplotlib, Tkinter
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
